Hub71 Application · Draft Answers

Family Hub · prepared August 2026 · every answer fits the form's word limits · **yellow chips are facts only the founder can fill in**

Honest position throughout: pre-revenue, private beta live on the web, bootstrapped, Gulf-first by design. Hub71 backs exactly this profile, so the answers lead with momentum and why Abu Dhabi. Nothing here is invented. Do not submit anything you cannot defend in an interview.

Q1 Describe in 280 characters what problem you are solving and how

Families run on four apps: one for the calendar, one for chores, one for pocket money, one for learning. Family Hub is one private space that does all four. Kids earn stickers for habits, then save or invest them. Chores become a child's first savings account.

260 CHARACTERS

Note: counted, fits the 280 limit.

Q2 What are you building and how is it different than what is already out there?

Four apps, one family. We replace all four.

Today a parent runs the house on Cozi, pays pocket money on GoHenry, chases homework on Khan Academy, and argues about screen time on WhatsApp. Four subscriptions, four logins, nothing joined up.

Family Hub is one private space per family. Calendar, meals, tasks and notices for the grown-ups. A PIN login and a world of their own for each child.

The join is the product.

A child ticks off a habit. That earns stickers. Stickers convert to real pocket money at a rate the parent sets. The parent can boost the rate, or invest the child's stickers so they grow week on week. A seven-year-old learns saving and compounding by taking out the bins. No debit card, so it works at the ages card companies cannot serve, and for parents who would never hand a child a card.

Screen time earns its keep too: logic, maths and world flags games for kids, with a progress view for parents. And the app bends to the family, with optional cultural lenses and flexible calendars for Muslim and multicultural homes that everyone else treats as an edge case.

Everyone else owns one corner. Cozi and FamilyWall own the calendar. GoHenry and RoosterMoney own money and need a card. Khan Academy owns lessons. None of them model a real family: twins, blended homes, grandparents, children who sign in with a PIN because they have no email.

Every family is a sealed tenant. That same isolation lets a school, nursery or club run Family Hub under their own name, which is our second revenue line from day one.

Q3 What is the 'Why Now' for your business?

Three things changed at once.

Parents are drowning. Two working parents, more activities, and a household run on WhatsApp threads and a paper chore chart. The "mental load" is now a mainstream conversation. None of that duct tape teaches a child anything.

Screen-time guilt peaked. Parents have stopped trying to ban screens and started asking what the screen gives back. A product where screen time turns into habits, savings and learning answers that question directly.

AI changed the cost of building. We shipped a production, multi-tenant platform for a fraction of what it used to cost. That means a small team can profitably serve the families the big players priced out.

Why Abu Dhabi, and why not later.

The Gulf is our first market by design, not by accident. Families here are larger, so our per-child model is worth more per household. Faith and family culture are built in, not bolted on. The UAE is actively funding childhood financial literacy and family wellbeing, which is exactly what our sticker economy delivers. **IF TRUE, ADD: I have already delivered software in the UAE, on ADCB's Open Finance programme, so I know this market and its banking rails first-hand.**

Q4 What are your plans for Abu Dhabi and Hub71 specifically?

Ninety days, four moves.

- **Month 1.** Incorporate in ADGM, complete Hub71 onboarding, and take Family Hub from private beta to public launch. Billing is the last piece and is already designed.
- **Months 1 to 2.** Run a closed beta with 50 to 100 Abu Dhabi families, recruited through school communities, nurseries and parent groups, with a weekly feedback loop shaping the launch build.
- **Months 2 to 3.** Sign the first two or three white-label community pilots: nurseries, homeschool co-ops, weekend schools. Hub71's network is how we get warm introductions.
- **In parallel.** Open conversations with UAE banks about their kids and family products. Our sticker economy is the natural on-ramp to a child's first real account. **IF TRUE: my ADCB Open Finance background gives us direct entry points.**

Hiring: one UAE-based community and growth lead, plus part-time engineering support. Fundraising: close a pre-seed anchored in the Hub71 investor ecosystem.

Day 90 looks like this: live in production, 100+ active UAE families, two signed community pilots, and week-4 retention above 40 percent. An Abu Dhabi-grown consumer SaaS story with numbers behind it.

Q5 What success metrics do you measure, and where are you with each of them?

We are pre-launch, so today we measure build and validation. Revenue metrics switch on at public launch.

Where we are. The whole journey is live in beta: family signup, onboarding, the kid PIN login, the parent dashboard with calendar, meals and tasks, the reward economy, and the learning modules.

Our execution metric. We shipped 235 product updates in the last 90 days, about two every working day, and nothing reaches a family until it clears 210+ automated checks. That is the delivery rate of a funded four-person team, on a payroll of one. It is the clearest evidence we can offer that capital put into this business turns into product quickly, and that speed is not costing us quality. **ADD IF YOU HAVE THEM: waitlist size, beta family count, any letters of intent.**

What we will run the business on from launch:

- Activated families: onboarding finished plus a child logged in within 7 days.
- Weekly active families, and habits completed per child per week.
- Free to paid conversion into Family ($7.99/mo) and Family Pro ($12.99/mo).
- Revenue split: family subscriptions against white-label community licences ($299 to $3,499 a year).
- Month-3 family retention.

First-year targets: 100 paying families in the first quarter after launch, and the first $1,000-a-month community deal by month 6.

Q6 Total revenue over the past 12 months

$0. Pre-revenue by choice: the product is in private beta and paid tiers switch on at public launch, which happens during the Hub71 programme.

Note: if the field only takes a number, enter 0 and let the metrics answer carry the context.

Q7 Total revenue last month

$0, pre-launch, as above.

Q8 Accumulative revenue since launch

$0. We have not launched commercially yet. Public launch with paid tiers is the first milestone of our Hub71 plan.

Q9 How much runway do you have left?

FILL IN, pick the true one.

Note: bootstrapped with near-zero monthly burn and able to sustain it past 12 months, then "more than a year" is accurate and reads strongest. If personal funding really covers 7 to 12 months, say that. Do not stretch it: they may ask you to walk through the maths.

Q10 How much have you raised to date?

FILL IN. If nothing external: "$0 external funding. Founder-funded to date, approximately $X invested personally."

Include your own cash. It shows commitment. If friends and family money came in, state the amount plainly.

Q11 Who are some notable investors?

None yet. Family Hub is 100 percent founder-funded and bootstrapped to a working product with zero outside capital. We are raising our first external round now and intend to anchor it inside the Hub71 ecosystem.

Note: honest and fine at this stage. Never name anyone who has not actually invested.

Q12 What makes your team special and how are you best positioned?

I am the customer, and I have shipped in this market.

I am a parent running a busy household: the exact coordinating parent we sell to. The sticker economy started as a system for my own kids, because nothing on the market did it.

Professionally I have **[N]** years delivering software for large enterprises, most recently on ADCB's Open Finance programme in the UAE **CONFIRM AND ADJUST**, so I know this region's banks and regulators first-hand.

What is unusual is how we build.

Family Hub is AI-native. One founder directing AI engineering agents delivers what used to need a funded team: 235 product updates in the last 90 days, roughly two every working day. The discipline is real, not improvised: written acceptance criteria for every feature, four levels of automated testing, 210+ integration tests, and per-family data isolation. Nothing ships that fails a check.

That means your capital buys growth, not headcount. And the moat compounds: each child's learning data personalises their lessons over time, so leaving Family Hub for a generic app feels like going backwards for the whole family.

Q13 Who is responsible for building your product?

Built in-house, led by me.

I own product direction, requirements and quality gates, and I direct AI coding agents (Anthropic's Claude Code) that implement under a strict process. Every feature carries written acceptance criteria, a code-review pass, and automated tests at four levels: unit, integration against a real database with row-level security, end-to-end browser tests, and performance tests. Nothing ships with a failing check.

This is not a no-code prototype. It is a typed TypeScript monorepo: Hono API, React web app, Postgres with row-level security isolating every family's data, Supabase authentication and Stripe billing, deployed on cloud infrastructure with a full staging environment. Production cutover is part of the launch plan.

What that buys you: 235 product updates in 90 days at near-zero engineering payroll, so almost every dollar invested goes into reaching families rather than into salaries. At Hub71 we add one or two engineers to own infrastructure and mobile, with this pipeline staying the core of how we ship.

Q14 Who are the (co-)founders and what are their roles? LinkedIn URLs

FULL NAME, Founder and CEO (**NATIONALITY**). Sole founder, owning product, engineering direction and go-to-market. LinkedIn: [URL]

ADD ANY ADVISORS OR PART-TIME CONTRIBUTORS IF REAL, WITH THEIR LINKEDIN URLS, CLEARLY LABELLED AS ADVISORS, NOT CO-FOUNDERS.

Note: being a solo founder is a known filter at accelerators. Meet it head-on in the interview: point at the 90-day shipping record and name the first two hires you would make with their money. If you have a credible advisor, list them. Never invent a co-founder.
