IMPACT MEASUREMENT FRAMEWORK

Evidencing the Theory of Change.

Every claimed outcome corresponds to a measurable indicator. Funders, the board, and the operating team review a shared dashboard to prevent narrative drift.

FRAMEWORK SUMMARY

Metrics are organised across four layers. **Outputs** quantify delivery. **Reach** quantifies adoption. **Outcomes** evidence behavioural change , including children's progression in **financial literacy from early childhood, embedded in everyday family life rather than in a separate kids-debit-card app** (the sticker economy: **earn · save · invest · spend**). **Impact** evidences population-scale change across family wellbeing, digital wellbeing, parental time recovery, and household coordination.

REGIONAL ALIGNMENT

FamilyHub is positioned as regionally relevant, policy aligned, and institutionally scalable. Active and intended ecosystem partners in the UAE include **Early Childhood Authority**, **ADEK (Abu Dhabi Department of Education and Knowledge)**, **Department of Community Development (Abu Dhabi)**, and **Family Development Foundation**.

Outputs	What did we ship + sell?	WEEKLY
Reach	Who is using it?	WEEKLY
Outcomes	Is anyone's life better?	MONTHLY
Impact	Is the world we want bending?	QUARTERLY

01 , Outputs

Delivery metrics

Reviewed weekly. Baseline is zero (pre-revenue).

Metric	Year 1	Year 2
Paid consumer families Source: billing system	1,000	5,000+
Partner organisations (branded deployments) Source: billing system	15	30+
Annual recurring revenue Source: billing system	$130k	$720k+
Learning modules launched Source: product roadmap	3	5+
Markets live Source: marketing	2	4+

02 , Reach

Adoption metrics

Reviewed weekly. Cohorts segmented in PostHog product analytics.

Metric	Year 1	Year 2
Children with 1+ active learning module Source: product analytics	1,500	8,000+
Families using 3 of 4 pillars / week Source: product analytics (cohort)	60% of paid · Y1	70% of paid · Y2
Paid families in MENA + ID + PK Source: billing country	40%	50%+
Paid families using cultural-flex features Source: product analytics (feature usage)	25%	35%
Free to paid conversion at day 30 Source: product analytics and billing	8%	12%

03 , Outcomes

Behavioural change

Reviewed monthly. Each outcome maps to a corresponding section of the Theory of Change. Together, these outcomes evidence that FamilyHub functions as infrastructure for family wellbeing, financial resilience, digital wellbeing, parental time recovery, and stronger household coordination , not as another single-purpose app.

Per-child Maths mastery delta after 90 days vs synthetic generic-placement control · Source: in-app activity data *Outcome: kids learn what they specifically need*	**+18 pp** YEAR 1	**+25 pp** YEAR 2
Weekly active days per child on a learning module Source: product analytics *Outcome: kids learn what they specifically need*	**3.5** DAYS · Y1	**4.5** DAYS · Y2
Children meeting a self-set savings goal in 30 days Source: in-app activity data (sticker economy , **earn · save · invest · spend**) *Outcome: kids learn money + responsibility , financial literacy from early childhood*	**35%** YEAR 1	**55%** YEAR 2
Self-reported minutes / week parents stopped juggling five apps Source: in-product quarterly survey *Outcome: parents reclaim time + mental-load , the one-dashboard-replaces-five-apps infrastructure for family wellbeing, digital wellbeing, and household coordination.*	**60 min** YEAR 1	**120 min** YEAR 2
Shared events + meals + assignments / family / week Source: in-app activity data *Outcome: families coordinate without nagging*	**12** YEAR 1	**18** YEAR 2
Monthly-active families using 1+ cultural-adaptability feature Source: product analytics (feature usage , e.g. Ramadan journal, multi-faith calendar, extended-family roles) *Outcome: historically-underserved households fit by design , cultural adaptability built in, not bolted on.*	**30%** YEAR 1	**45%** YEAR 2
Partner organisations with 5+ active member-families Source: billing and product analytics *Outcome: community orgs get a digital home*	**10** YEAR 1	**25** YEAR 2

04 , Impact

Population-scale change

Reviewed quarterly. Compounds with cohort age. Anchors the long-term thesis: child learning hours that count, **financial literacy from early childhood**, and family-resilience infrastructure reaching markets historically underserved by mainstream family-tech.

Metric	Year 1	Year 2
Cumulative AI-personalised lesson completions Across all children · Source: in-app activity data	250k	2M+
Aggregate minutes saved across paid families / year Source: Quarterly survey × paid base	17k hrs	170k+ hrs
% of paid base in MENA + Indonesia + Pakistan Source: billing system	40%	50%+
Member-families served via branded partner deployments Source: billing and product analytics	1,200	8,000+
Children who completed a save-then-spend cycle Source: in-app activity data (sticker economy , **earn · save · invest · spend**) , the core financial-literacy behaviour	1,000	6,000+

05 , Data sources

Measurement infrastructure

- **Billing system.** Revenue, conversion, churn, country of billing. Primary source of truth.
- **Product analytics.** Feature usage, cohorts, conversion funnels. Operational from launch.
- **In-app activity data.** Per-child learning events, sticker transactions, family activity. Owned and recorded directly, not approximated.
- **In-product surveys.** Self-reported parent feedback (e.g. minutes saved, satisfaction scores). Cross-referenced against behavioural data.
- **Reliability monitoring.** Uptime and error rates. Feeds the “does the product actually work for them” layer.

06 , Cadence + governance

Review and reporting cycles

Weekly	**Founder.** Output + reach metrics. One-line written update.
Monthly	**Founder + first hire** (once on team). Outcome metrics. Compare against ToC assumptions, flag drift.
Quarterly	**Founder + board / funders.** Impact metrics. Full ToC review, re-route if assumptions broke.
Annually	**Founder + board + funders.** External-facing impact report. Numbers, narrative, what changed in the ToC.

07 , Equity + privacy guardrails

Operating principles

- **Children under 13.** No personal information in analytics , aggregates only. Compliant with US children's-privacy law (COPPA) by design: automated personal-data redaction, anonymised analytics identifiers.
- **Cultural metrics are opt-in.** A family choosing the Ramadan journal is a feature preference, not a profiled attribute we sell or surface outside the family.
- **No engagement-for-engagement's-sake.** Learning outcomes and parent-time-saved are measured rather than session length. Sticker streaks have caps to prevent compulsion-loop dynamics.
- **No dark patterns.** Pricing and cancellation flows comply with UAE Consumer Protection Law, UK Consumer Rights Act, and US Federal Trade Commission rules.

08 , Open questions for v2

Areas for v2 refinement

- **Counterfactual control.** Personalisation vs generic placement is currently a synthetic control. Fund a randomised cohort study by year 2.
- **External validation.** Partner with an education-research body (EEF in UK, IIE Cairo) for an independent mastery-delta study once enrolment crosses 3,000 children.
- **Long-tail outcomes.** Family bonding + child confidence can't be measured cleanly with click data. Annual qualitative interviews with 20 to 30 families to triangulate.
