

# Family Hub · QA Brief 2: Feature tour

App: [frontend-staging-409d.up.railway.app](https://frontend-staging-409d.up.railway.app) · sign up free · test each area phone-first (375px), then tablet, then laptop

## 1 First contact & sign-up Sarah

Welcome, Pricing, About and Legal pages → “Start free” → create the family with its own web address (like /t/khan-family) → sign in by email magic link or Google (no passwords anywhere) → onboarding wizard: add members with roles and kids' ages; timezone and currency auto-detected; starter habits pre-seeded.

**Explore:** typos in email, expired magic link, going back mid-wizard, tiny screens.

## 2 Parent dashboard Sarah Yusuf

Six tabs: **Today** (the day at a glance), **Meals** (week planner + snacks), **Calendar** (events, repeating events, and a private subscribe link that feeds Google/Apple/Outlook calendars), **Assignments**, **Noticeboard** (family notes with emoji), **Tasks** (assign, filter by member, mark done).

**Explore:** member filters, week arrows, long titles, empty tabs.

## 3 Family management Sarah (admin) Yusuf

Manage Family splits Grown-ups (email sign-in) and Kids (PIN sign-in). Invite adults by email, add kids without an email, set or reset 4-digit PINs, grant or remove admin rights (the last admin is protected), remove members, change your own email safely.

**Explore:** what a non-admin like Yusuf can and cannot see; invite the same person twice.

## 4 Reward economy setup Sarah (admin)

Reward settings: money value per sticker (per-child override), habit pay boosts (2x/3x/5x), optional skip penalty, pocket money. Admin Panel: every child's balances, week history, and quick actions (claim reward, cash out, save, invest, withdraw). Reward shop items and kids' reward requests.

**Explore:** change the sticker rate mid-week; can a non-admin reach any of this?

## 5 Kid experience Amina younger kids

Kid login: tap your avatar, enter your PIN (wrong-PIN lockout protects the account). My World: the week's habit tracker (tap a day to mark it), stickers earned, weekly account (earned / saved / invested), money-skills view, reward shop and requests, end-of-week recap.

**Explore:** role-play an 8-year-old. Is anything confusing, unreadable, or reachable that shouldn't be? Parent settings must be impossible to reach.

## 6 Learn (kid-only) kids Sarah sees insights

Logic (patterns, odd-one-out, if-then, sorting; three difficulties), Maths journey (placement test, lessons, times-table practice, challenges, certificates), World Flags (explore the map, flashcard study path, quizzes, certificates), plus a reading log. Parents never play; they get a read-only Learning Insights tab per child.

**Explore:** quiz exits, certificates, difficulty jumps, a kid quitting mid-lesson.

## 7 Child World, per child Sarah Yusuf

From the account menu, open any child's world: their habits and rewards, meals, calendar, journal and learning insights, plus the week-close flow (claim / cash out / save / invest / withdraw dialogs with a full audit trail).

**Explore:** close a week, reopen it, verify the money maths always adds up.

## 8 Cross-cutting checks everyone

Phone-first layouts everywhere, finger-sized tap targets, no sideways scrolling, browser back button, double-taps, two adults using the same family at once, the beta feedback widget (bottom corner), sign out and back in.

**Not built yet, don't report:** payments/billing, community/white-label features, custom subdomains, production domain.
