

Family Hub · QA Brief 1: What you're testing

For our external QA tester · August 2026 · App: frontend-staging-409d.up.railway.app · free, no card, no real payments anywhere

The idea in one paragraph

Family Hub is a private online space for one family. Parents run the household in it (shared calendar, meals, tasks, assignments, notices), and kids log in with their own PIN to earn stickers for good habits, then save, spend or invest those stickers, so chores quietly teach money skills. Kids also get “beneficial screen time”: built-in learning games for logic, maths and world flags. Every family's space is fully private, and the product is built for real families: big families, blended families, twins, grandparents, and culturally rooted households.

The family you'll role-play (our reference personas)

- **Sarah Khan, the coordinating parent (admin).** Runs the family's mental load from her phone. Sets up the family, invites people, configures the reward economy. If something takes more than a few taps between school runs, that's a finding.
- **Yusuf Khan, the second adult.** Joins by email invite. Uses the everyday screens (tasks, calendar, meals) but must never see admin settings. Tech-fluent, notices rough edges.
- **Amina Khan, the teen.** Signs in with a PIN, runs her own habits and money. Too old for anything that feels babyish.
- **The younger kids (5-11).** PIN login on a shared tablet or a parent's phone. Everything they see must be tappable, readable and safe; parent settings must be unreachable.
- **Not in this beta:** community administrators (schools/clubs running many families) and billing. Everything is free on staging.

What we need from you

- **Usability gaps.** Where would Sarah get stuck, hesitate or mis-tap? Test phone-first (375px wide; most of our users are on phones), then tablet, then laptop.
- **Product validation.** Does the idea land? Which features feel valuable, which feel confusing or pointless? Would you pay \$7.99/month as a parent, honestly?
- **Functional gaps.** Broken flows, dead ends, wrong data or money maths, empty states, double-taps, browser back button, expired sign-in links, wrong PINs.

How to report

One line per finding: **screen** → **what you did** → **what you expected** → **what happened**, plus a screenshot and your device/browser. Severity: blocker / annoying / polish. Send as a shared doc or sheet; we triage together weekly.
